The goal of the work environment on the Powerbox is for all employees to create a safe, healthy and good workplace - both from a physical and psychological aspect.

Within our company, we have a business that does not involve any major safety risks.

However, we are aware that we must constantly monitor the work environment so that no new risks emerge and also to work is more than just the absence of risk. Being comfortable with and develop their skills and to work in a friendly environment is important to us. An open attitude and discussions with all employees is important for us to give employees the opportunity to progress in work.

In our daily work, each employee show personal responsibility for health and the environment, both their own and others. It is for everyone - not just follow the instructions and procedures - but also to be mindful of and immediately report potential risks and threats to a healthy work environment.

Powerbox will provide the occupational exercised by the working conditions. With occupational referred to an independent expert resource active in the fields of occupational health and rehabilitation. This means having the skills to prevent and eliminate health hazards in the workplace and to have the skills to identify and describe the relationship between the work environment, productivity and health.

The safety inspection, i.e. fire inspection and review of the work environment such as ergonomics is performed at least annually. The procedure is:

Identification of possible risks

- Proposed measures
- Implementation of the approved measures
- Monitoring and evaluation of implemented measures
