Line Protection & EMC Considerations

1. Typical Application

- Below shows some blocks connected between power source and DC/DC module. Install the circuit of the block which is required.
- Each block has individual function and should be placed on the corresponding location.

If CEMI is an Aluminum electrolytic capacitor and connected in parallel with CEMS, The capacitance we recommended for meeting EMS requirements could be CEMS plus CEMI.

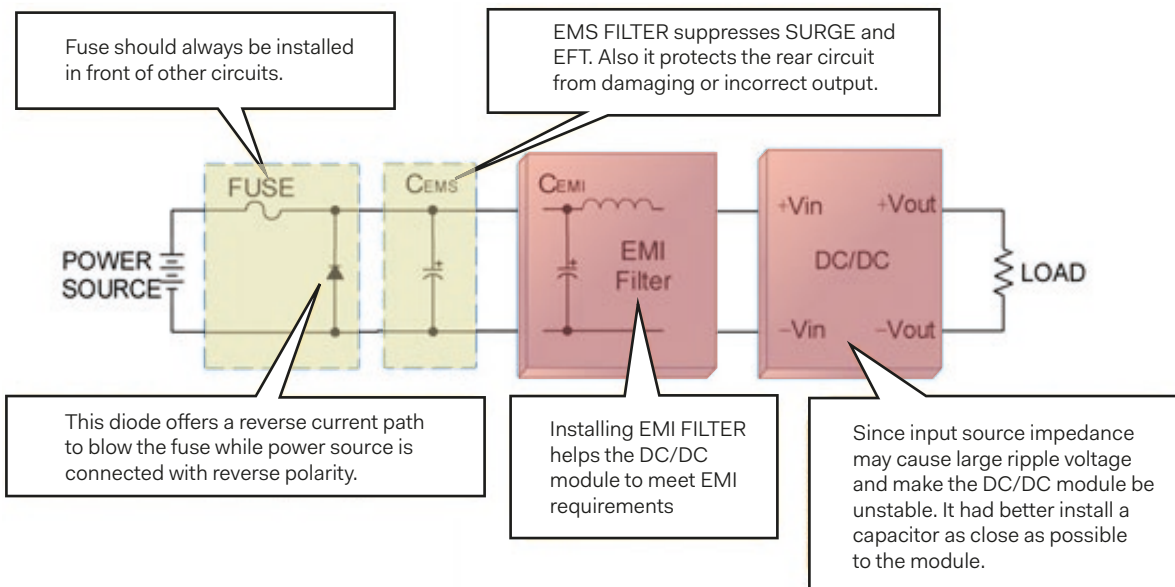

Fig. 1-1 Typical Application

- Input source impedance: The power modules will operate as specifications without external components, assuming that the source voltage has a very low impedance and reasonable input voltage regulation. Highly inductive source impedances can affect the stability of the power module. Since real-world voltage source has finite impedance, performance can be improved by adding external filter capacitor.

The PQAE100-24S□□W and PQAE100-48S□□W recommended Nippon Chemi-con KY series, 100μF/100V.

The PQAE100-110S□□W recommended Ruby-con BXF series, 39μF/200V.

2. Line Protections

Fuse

- The DC/DC converter is not internally fused. An input line fuse must always be used.
- Fuses should be installed in front of each module when multiple DC/DC converters connect to the same power source.

Model	Fuse Rating (A)	Fuse Type
PQAE100-24S□□W	20	Slow-Blow
PQAE100-48S□□W	10	Slow-Blow
PQAE100-110S□□W	4	Slow-Blow

Table 2-1 FUSE selection

- According to actual current value, calculating fuse ratings base on the following equations:

$$I_{FUSE} \geq I_{in} / (\text{rerating} \times \text{safety margin})$$

$$\text{Melting } I^2t = I_{PULSE,act}^2 \cdot t / 0.22$$

Where

I_{FUSE} is current rating of fuse.

I_{in} is actual value of input current.

Rerating is percentage of fuse rating base on ambient temperature. Fuse rating is variety under different ambient temperature.

Safety margin is percentage of fuse rating set by user.

Melting I^2t is pulse energy rating of fuse.

$I_{PULSE,act}$ is actual input pulse current.

t is the width of the input pulse current.

Reverse Input Voltage Protection

- Avoid the reverse polarity input voltage; otherwise, it will damage the DC/DC converter.
- It is likely to protect the module from the reverse input voltage by installing an external diode.
- The diode can blow the line fuse to protect DC/DC converter.
- Recommend using Schottky diode for reverse input voltage protection.

Fig. 2-1 Reverse input voltage protection

Model	Voltage Rating of the Diode	Current Rating of the Diode
PQAE100-24S□□W	60V	1~1.5 x Fuse Rating
PQAE100-48S□□W	100V	1~1.5 x Fuse Rating
PQAE100-110S□□W	200V	1~1.5 x Fuse Rating

Table. 2-2 Reverse protection diode selection

3. EMS Considerations

- The module can meet EMS requirements as below.
- An external input filter capacitor is required if the module has to meet EN61000-4-4, EN61000-4-5.

Parameter	Conditions	Level	
ESD	EN61000-4-2	Air $\pm 8\text{kV}$ and Contact $\pm 6\text{kV}$	Perf. Criteria A
Radiated immunity	EN61000-4-3	20 V/m	Perf. Criteria A
Fast transient	EN61000-4-4	$\pm 2\text{kV}$	Perf. Criteria A
Surge	EN61000-4-5	EN55024: $\pm 2\text{kV}$ and EN50155: $\pm 2\text{kV}$	Perf. Criteria A
Conducted immunity	EN61000-4-6	10 Vr.m.s	Perf. Criteria A
Power frequency magnetic field	EN61000-4-8	100A/m continuous; 1000A/m 1 second	Perf. Criteria A

Derating Output Load versus Ambient Temperature and Airflow
 With 0.24" Heat-Sink , Vin(nom)

Derating Output Load versus Ambient Temperature and Airflow
 With 0.5" Heat-Sink , Vin(nom)

POWERBOX Industrial Line
 PQAE100W Series
 Up to 90W 4:1 Single Output
 High Performance DC/DC Converter
 Manual

All test conditions are at 25°C. The figures are identical for PQAE100-48S48W

Typical Output Ripple and Noise.
 $V_{in}(nom)$; Full Load

Transient Response to Dynamic Load Change from
 100% to 75% to 100% of Full Load; $V_{in}(nom)$

Typical Input Start-Up and Output Rise Characteristic
 $V_{in}(nom)$; Full Load

Using ON/OFF Voltage Start-Up and Output Rise Characteristic
 $V_{in}(nom)$; Full Load
